Why Use LED Retrofit Kits

Maintain visual consistency by reusing your existing Galileo fixtures. Quickly swap out the outdated and inefficient lamping assembly to LED while reusing the current cage/diffuser.

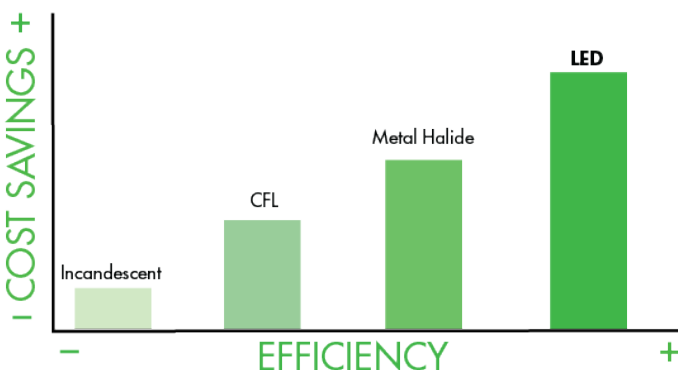

Improved Light Quality

Better lighting and visual ambience creates a safe and welcoming environment. Our LED retrofit kits are a significant improvement in regards to lumen output and color temperature.

Energy Efficiency/Cost Savings

LED light engines are exceptional in comparison to other lighting systems by producing equal or higher lumen output at lower wattages. This superior efficacy reduces power consumption and produces cost savings over time.

LED Long Lifespan

LED light engines are more durable, can last over 50,000 hours (L70), and require less maintenance such as the need for lamping replacements. There is no delay for warm-up time and LED luminaires can operate in extreme climate ranges.
